

Figure 1. Schematic diagram of the experimental setup. The subject is seated in a chair and views the target through a video camera. The target is a light source that is controlled by a computer. The subject's hand is positioned on a force sensor that is also controlled by the computer. The computer records the force exerted by the subject's hand and the position of the target. The subject is instructed to move the hand to the target and maintain contact with it for a specified duration. The force sensor measures the force exerted by the hand on the target, and the video camera records the position of the hand and the target. The computer processes the data and provides feedback to the subject.
